

EU-directive 2011/65/EU

The Directive 2011/65/EU (known as RoHS2) of 8 June 2011 and Commission Delegated Directive (EU) 2015/863 (RoHS3) of 31 March 2015 amending Annex II to Directive 2011/65/EU established maximum concentration values for 10 restricted substances in electrical and electronic equipment (EEE) placed on the market in EU member states. RoHS restricted substances and their maximum allowable concentration values by weight in homogeneous materials include:

Lead 0.1%, Mercury 0.1%, Cadmium 0.01%, Hexavalent chromium 0.1%, Polybrominated biphenyls (PBB) 0.1%, Polybrominated diphenyl ethers (PBDE) 0.1%, Bis(2-ethylhexyl) phthalate (DEHP) 0.1%, Benzylbutyl phthalate (BBP) 0.1%, Dibutyl phthalate (DBP) 0.1%, Diisobutyl phthalate (DIBP) 0.1%

Avery Zweckform does not intentionally use RoHS restricted substances in the production of label products and has no reason to suspect that these substances are present in our self-adhesive label stock at levels above the allowable concentrations. This statement is based on information from our raw material suppliers and our knowledge of label-stock raw materials and processing.

Exceptions to this are the materials coffee cup paper and vegetable bagasse paper from our "Custom printed" label range, for which we were unable to obtain any information from the supplier of the material.

Avery Zweckform has not conducted laboratory analysis to determine the presence or absence of RoHS regulated substances in our products.
